

The iWell Monitor System blends Edge technology with the latest in cellular communication to provide an intelligent, customizable and economic remote monitoring solution. Combined with our iWell Operating System access to data is a simple login away. Secure data storage, trending and advanced analytics for all your mission critical information is available anytime, anywhere to those who need it most. With flexible, multiple I/O options, the iWell Monitor System can connect to any sensor or modbus enabling data collection from pipelines, injection systems, artificial lift, remote batteries and more.

- Global cellular coverage
- Configurable read and report intervals with threshold and delta alarms
- Multiple configurable I/O make it possible to connect to multiple sensor types
- Wired HART and Modbus protocol support
- External, configurable power outputs
- Class 1, Division 2 weatherproof enclosure
